Data Cleaning Gig — SEO Keywords & Optimized Copy

TIER 1: PRIMARY KEYWORDS (Use in title + first 2 lines)

These have decent search volume, low-to-medium competition for new sellers, and high buyer intent (they know exactly what they want).

- **data cleaning**
- **excel data cleaning**
- **duplicate removal**
- **messy data**
- **data standardization**

TIER 2: TAGS (Pick 5, Fiverr/Upwork style)

Narrow, searchable tags that rank you for specific problems:

1. `data cleaning`
2. `excel cleanup`
3. `duplicate removal`
4. `data entry`
5. `csv cleaning`

Alternative set if you want to test:

1. `data cleaning`
2. `spreadsheet cleaning`
3. `data standardization`
4. `excel formatting`
5. `data processing`

TIER 3: LONG-TAIL KEYWORDS (Paste into description)

These are less searched but *convert better* because they're specific pain points — buyers searching these have urgent problems and fewer cheap alternatives.

- "clean messy spreadsheet"
- "remove duplicate rows"
- "fix inconsistent dates"
- "standardize text formatting"

- "organize messy excel file"
- "convert csv to clean data"
- "fix broken formatting"
- "clean customer data"
- "clean sales data"
- "clean contact list"
- "clean order data"
- "fix mixed date formats"
- "remove blank rows"
- "data validation and cleanup"

OPTIMIZED GIG TITLE (110 chars max)

Primary rank play:

```
I will clean messy Excel & CSV data — duplicates, dates, formatting
```

Why this works:

- Opens with action verb "clean" (strong keyword)
- Lists specific problems (duplicates, dates, formatting) — these are what people actually search for
- Includes file types (Excel, CSV) — buyers often search by their current file type
- Short, scannable, keyword-dense

OPTIMIZED GIG DESCRIPTION (Opening — most important)

First 2–3 lines (this is what shows in search results):

```
Got a messy spreadsheet full of duplicate rows, inconsistent dates,
or mixed-up formatting? I'll clean it fast and deliver a file
ready for analysis or use.
```

Why:

- Starts with the pain ("messy spreadsheet")
- Names specific problems (duplicates, dates, formatting) — all high-intent keywords
- Promises speed and usability (what buyers care about)
- 2–3 lines, scannable

Then expand with service bullets using long-tail keywords:

✓ Clean messy Excel and CSV files
✓ Remove duplicate rows automatically
✓ Fix inconsistent date formats (convert all to one standard)
✓ Standardize text formatting and casing
✓ Remove blank rows and junk data
✓ Normalize categorical values (status, country, categories, etc.)
✓ Flag suspicious data for your review (not just blindly "fix" it)
✓ Parse mixed data (e.g. split full names into first + last)
✓ Clean contact lists, customer data, order data, any tabular data

Why this format:

- Each bullet uses a long-tail keyword naturally
- "Clean messy Excel" / "Remove duplicate rows" / "Fix inconsistent dates" are all things people search
- Covers different buyer pain points (some need duplicates fixed, some need dates, some need names split)

TIER 4: INDUSTRY/USE-CASE KEYWORDS (Optional but powerful)

Add these naturally in your description if relevant to your target market:

- "clean customer data"
- "clean sales data"
- "clean order data"
- "clean contact list"
- "data cleanup for analysis"
- "prepare data for reporting"
- "clean e-commerce data"
- "clean survey results"

(These help you rank for specific industries, not just generic "data cleaning")

FAQ/Description Section (Lower in gig, still SEO-valuable)

Include a mini-FAQ that naturally weaves in keywords:

```
Q: What file types do you work with?
A: Excel (.xlsx, .xlsm), CSV, TSV, and other tabular formats.
   I'll return it in your original format or convert it.

Q: What if my data has really messy date formats?
A: I specialize in fixing inconsistent dates — DD/MM/YYYY, MM-DD-YY,
   text dates like "January 5, 2024" — all converted to one clean standard.

Q: Do you remove duplicate rows or just flag them?
A: Both options available. I can remove exact duplicates, or flag
   fuzzy matches for your review (e.g., "John Smith" vs "Jon Smith").

Q: How long does data cleaning take?
A: For files up to 5,000 rows: 2–3 days. Larger files available as add-on.
```

Why: Natural keywords + buyer confidence + shows you handle real scenarios

---

PRICING NOTE (For your tier — don't bury this)

Make sure pricing is visible early:

```
🥉 Basic — $25 (up to 500 rows)
🥈 Standard — $60 (up to 5,000 rows) ← START HERE
🥇 Premium — $120 (up to 20,000 rows)
```

Why: Buyers often filter by price. Starting at $25 catches the "test you out" clients fast. Standard tier ($60) is where repeat customers usually land.

KEYWORD DENSITY CHECKLIST

Before posting, count mentions of your top keywords in title + description:

- "clean" or "cleaning" — should appear 5–7 times
- "data" — 4–6 times
- "Excel" or "CSV" — 3–4 times
- "duplicate" — 2–3 times
- "standardize" / "format" — 2–3 times

(Too many looks spammy; too few and you don't rank. This range is natural + searchable)

POSTING STRATEGY

On Fiverr:

- Title: use "I will clean messy Excel & CSV data — duplicates, dates, formatting"
- Tags: `data cleaning`, `excel cleanup`, `duplicate removal`, `data entry`, `csv cleaning`
- Description: paste the optimized opening + bullets + FAQ
- Category: Data → Data Cleansing

On Upwork:

- Title: same
- Overview/skills: add tags like "Data Cleaning," "Excel," "CSV," "Data Entry"
- Description: same, but Upwork lets you be longer — use all the bullets + FAQ

On Freelancer.com:

- Title: same
- Category: Data Processing
- Description: same format

WHAT TO AVOID (Kills your ranking)

❌ Generic titles like "Professional Data Cleaning Services"
❌ Keyword stuffing (repeating "data cleaning data cleaning data cleaning")
❌ Vague descriptions ("I'm good at many things, including data")
❌ No mention of specific problems you solve
❌ Pricing hidden in description (put it front and center)
❌ No portfolio/samples (attach before/after of your clean_data.xlsx if you can)

FIRST CLIENT LANDING HACK

Once your gig is live, actively search for buyers in these two places:

1. **Platform "Requests" section** (Fiverr calls it "Find Opportunities")
    - Filter for: "data cleaning," "excel fix," "remove duplicates," "clean spreadsheet"
    - Send custom pitches to the most recent 10 requests per day
    - Use your keywords naturally in the pitch
2. **Recent jobs on Upwork with low bids**
    - Search: "data cleaning" or "excel" in Jobs
    - Look for posted jobs with only 2–3 bids

- Pitch directly with a 1-line custom offer

This active outreach gets you your first 2–3 clients 10x faster than waiting for gig searches alone.

FINAL COPY (Ready to paste)

TITLE:

```
I will clean messy Excel & CSV data — duplicates, dates, formatting
```

OPENING:

```
Got a messy spreadsheet full of duplicate rows, inconsistent dates,
or mixed-up formatting? I'll clean it fast and deliver a file ready
for analysis or use.
```

TAGS:

```
data cleaning, excel cleanup, duplicate removal, data entry, csv cleaning
```

BULLET LIST:

```
✓ Clean messy Excel and CSV files
✓ Remove duplicate rows automatically
✓ Fix inconsistent date formats (convert all to one standard)
✓ Standardize text formatting and casing
✓ Remove blank rows and junk data
✓ Normalize categorical values (status, country, categories, etc.)
✓ Flag suspicious data for your review (not just blindly "fix" it)
✓ Parse mixed data (e.g. split full names into first + last)
✓ Clean contact lists, customer data, order data, any tabular data
```

Go post this. You're ready.
